

# West Fundamentals

- ``west update`` syncs the manifest and pulls all Zephyr modules.
- ``west build -b <board> -d build/<app> <app-path>`` configures and builds an app.
- ``west flash -d build/<app> --esp-device COM12`` flashes the image.
- ``west monitor -d build/<app>`` opens a serial monitor (runner-dependent).
- ``scripts/build.py`` wraps common build/flash/monitor commands.

Key idea: West is Zephyr's preferred build environment.
