

Tracing in Zephyr - Introduction

- Understand the benefits of tracing for real-time systems
- Gain an overview of tracing solutions available in Zephyr (free and commercial)
- Learn about Trace Compass and how to obtain and install it

percepio
CONTINUOUS OBSERVABILITY

LTTng is

System-wide insight

LTTng allows to understand the interaction of a given system, i.e.:

- The Linux kernel, using either a instrumentation points
- C/C++ applications
- Java applications
- Python applications
- Any other user space application

Tracing all those components with LTTng providing great insight into the system trace:

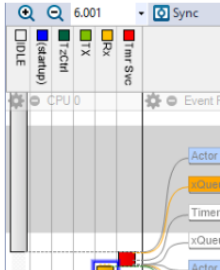

Time	App.	Event
17:23:05.035454	my-app	startup
17:23:05.043948	my-app	readConfig
17:23:05.044120	linux	sys_open
17:23:05.044120	linux	sys_stat
17:23:05.044498	linux	sys_read

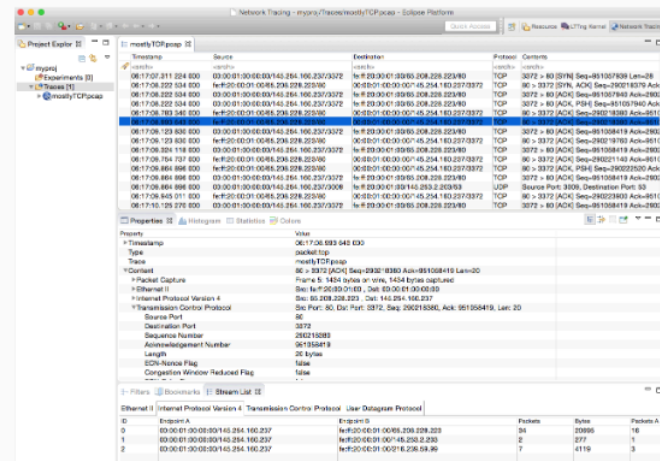

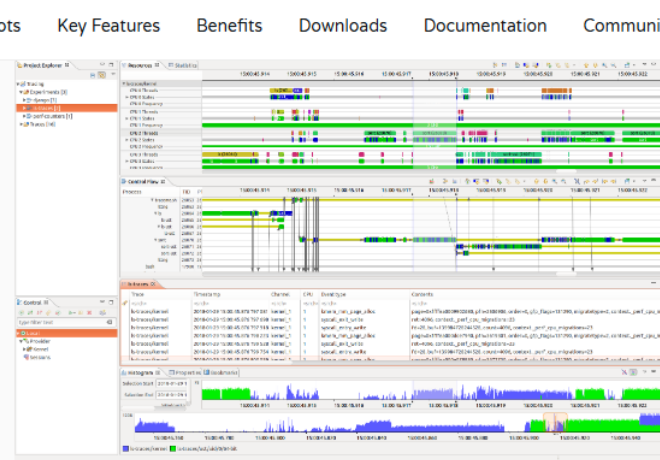

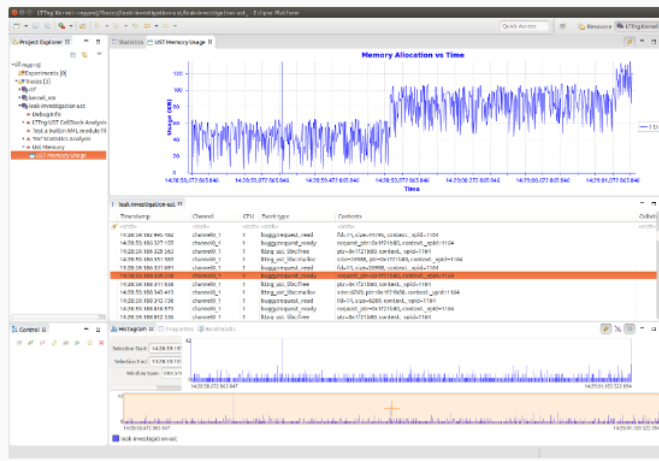

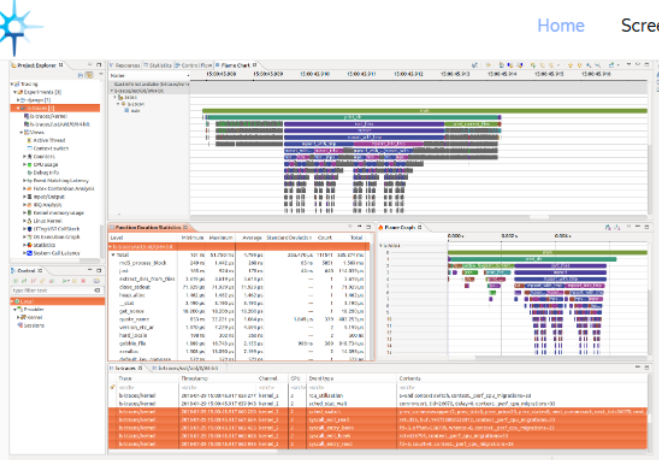

Tracealyzer F

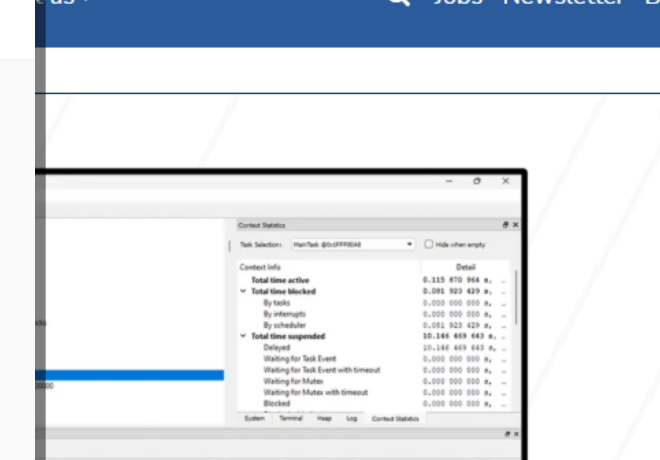

Percepio Tracealyzer provides a simplifying debugging a picture of the system by seeing the details. The host

Trace Views and I

Trace View

Key idea: Tracing reveals when and why events occur inside a real-time system.
